

I would like to offer this letter of recommendation for Environmental Systems Corporation (ESC) of West Hartford, CT for the comprehensive energy project that they designed and implemented for Connecticut Spring and Stamping (CSS). With ESC's help, we were able to complete a large comprehensive energy conservation project including a generous incentive from Eversource . The incentive enabled us to save money on the project and avoid a large amount of capital expenditure. We also anticipate over a \$100k annual savings in energy costs. The project initially consisted of a large LED lighting project and replacing older roof top heating and cooling units with new energy efficiency units. We were also able to include a complete rebuild of our dust collection system which has improved function, safety, and energy saving components.

The overall installation was smooth and seamless. The installers were neat, clean, organized and extremely helpful with anything we needed. Jack Cunningham, Sales Manager and Jamie Sykora, Project Manager kept me updated regularly as the project progressed. The installation went so smoothly that we are considering a second energy saving project with ESC.

I highly recommend Jack Cunningham and the folks at ESC if you are considering an energy conservation project. They took care of everything from start to finish from proposal to incentives, installation and clean-up. I would like to thank ESC for making this project easy for us with no hassle and the added benefit of new energy efficient equipment.

Sincerely

A handwritten signature in blue ink that reads "Joe Tourville". The signature is fluid and cursive, with a long, sweeping underline that extends to the left.

Joe Tourville
