

We are Pleased to announce our satisfaction with the service and professionalism, offered to us by Environmental Systems Corporation (ESC).

This is a company with high integrity and strong, values focusing on the utmost levels of customer satisfaction.

ESC was able to put a comprehensive energy conservation project together for SECONN through the large industrial program by Eversource. The project was able to save us \$54,509.54 annually. The project consisted of new LED lighting throughout the facility as well as compressor controls to save energy when it is not in use. We were also able to do the entire project without having to pay out of our capital budget by going through the Eversource Commercial Industrial loan.

The project installation was turnkey and went very smoothly. The installers on the lighting and compressor projects were polite, professional, courteous, and neat. The lighting is much brighter and has dramatically changed the look of the whole facility.

I would highly recommend using ESC for any energy conservation project you are entertaining. They are capable of doing large scale energy projects from start to finish. They handle all the utility paperwork, energy calculations', installation, and clean up.

Sincerely

Paul Brax

Facilities Manager
