Environmental Systems Corporation expands offerings in solar energy market

WEST HARTFORD, Conn. – March 28, 2022 – Environmental Systems Corporation (ESC), a leading provider of building technology solutions throughout Connecticut, is pleased to announce that it has **expanded its energy solutions capabilities to include solar power.**

*“We’ve seen increased interest in solar energy across the board,” says **Jack Cunningham, director of energy solutions sales.** “It used to be that when we went to see a customer, they wanted to talk about lighting and mechanical system upgrades. Now, the conversations almost always involve solar.”*

Cunningham correlates this uptick in demand with the ambitious targets set by Connecticut and other New England states to **decarbonize and reduce the use of fossil fuels.**

“There have been some big changes in available financing options to help organizations adopt solar power to fund electric vehicle (EV) charging stations and related energy efficiency projects. And there’s been rapid improvement in the technology, so that today’s solar arrays produce way more power than those of even a few years ago,” says Cunningham.

With solar installation experts on staff, ESC is positioned to provide comprehensive energy solutions as a complement to its full suite of integrated building automation and technology services.

About ESC

Established in 1972, ESC helps facility owners and managers enhance facility performance by planning and integrating intelligent building solutions to optimize comfort, security, life safety, energy efficiency and audio/visual technology. We have built a reputation as a leading-edge provider of state-of-the-art technology solutions with the highest level of customer service.
